

# HERRINGTON HARBOUR NORTH

SPECIAL CHANNEL NAVIGATION ADVISORY (Last updated 2/14/08)

We've been monitoring recent changes in the depth of the channel and would like to bring to your attention 2 areas (*marked below*). Based on a recent series of soundings, these locations show an accelerated rate of fill-in.

While we have dredged the entire marina to 7' MLW this winter, **the dredging of the federal channel has been scheduled to begin in fall of 2008, and will be done by the U. S. Army Corps of Engineers.**

In the meantime, please give a wide berth to these areas until work on the channel is completed.

If your draft is 5 feet or more, we recommend you avoid the edge of the channel between Marker #9 and Buoy #7 and around Marker #2 near the tip of the Jetty.

LAT 38°.45'.86" LONG 76°.32'.80"

We monitor VHF 9 & 16
